**COMPATIBILITY**

TERRAMAR™ is compatible with most insecticides, fungicides and fertilizers. Some pH adjustments may be required with acidic mixtures. Add surfactants after the product has completely dissolved in the tank solution. If interaction of chemicals is unknown, a “jar” compatibility test is recommended.

**DIRECTIONS FOR USE**

TERRAMAR™ dilutes in water and is suitable for use in liquid foliar, soil applied, and irrigation water applications, including Calcium Ammonium Nitrate and Calcium Thiosulfate solutions. Regular applications are important for maximizing crop potential during unexpected stress. Rate is 2.0 to 4.0 quarts per acre. Apply as needed based on soil tests or according to recommendations in your nutrient management plan.

**FOLIAR APPLICATIONS**

Fill half the spray tank with water, begin agitating and add recommended amount of TERRAMAR™ with remainder of water and spray solution. A minimum spray volume of 15.0 gallons per acre is recommended. Use a surfactant for maximum dispersal and leaf adherence.

**SOIL APPLICATIONS**

Soil-applied treatments can be made by mixing with soil applied nutritional products, through directed sprays to the soil, sidedress treatments, applications through the irrigation systems or any other methods which effectively apply TERRAMAR™ to the soil. TERRAMAR can be applied through drip, microjet, sprinkle, overhead, infurrow, flood and other types of irrigation at the suggested rates.
